SILOSTOP[®]

Proven by Scientists. Preferred by Farmers.

W/B

White on Black 1-Step
Oxygen Barrier Silage Cover

Silostop[®] vs regular 5mil plastic

Benefits of Silostop[®]

- Reduce dry matter loss
- No spoilage to pitch
- Labor saving
- Higher quality feed
- 60x more effective than regular cover

What is Silostop® W/B 1-step film?

The Silostop® effect

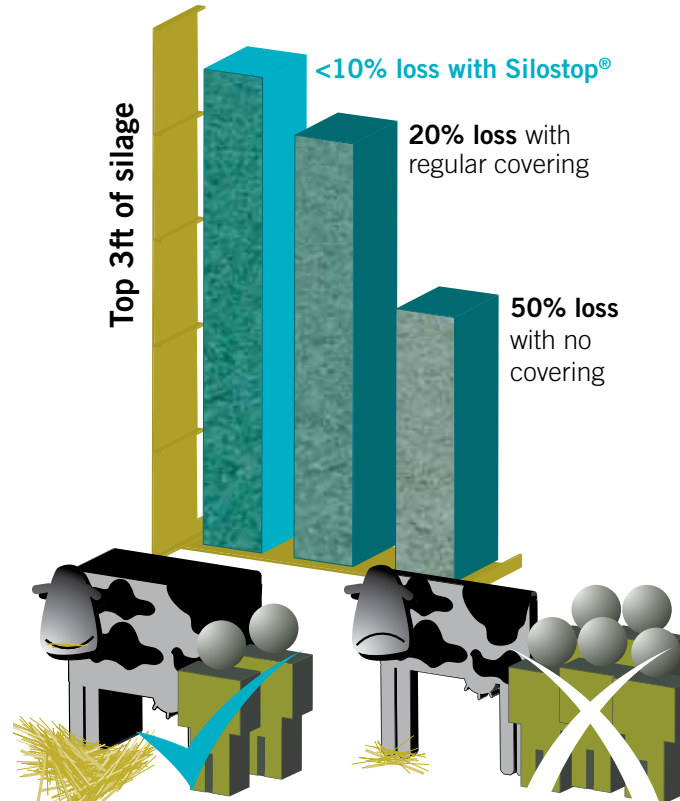

Silostop® White on Black 1-step Oxygen Barrier Silage cover is a 5 mil impermeable film which looks just like a regular silage cover but incorporates the patented Silostop® technology which prevents the entry of oxygen into the silage. It is strong, easy to use, and very cost effective. Use of Silostop® results in minimal silage loss, improved animal intake and improved animal health.

Oxygen Transmission Rate (OTR) comparison

Sample	Thickness mil	OTR	
		ASTM D3985 100% O ₂ cm ³ /m ² /24h	DIN 53380-3 21% O ₂ cm ³ /m ² /24h
Regular W/B silage cover	5	2000	400
Silostop® W/B 1-step	4.8	10	1.8

The table shows that standard independent lab tests prove that Silostop® is at least 60 times more of a barrier to oxygen than conventional 5mil white on black silage covers.

For ultimate forage quality, we recommend combining Silostop® W/B 1-Step Oxygen Barrier silage cover with Silostop® gravelbags.

Using Silostop® results in a reduction of labor requirements and improved feed intake.

Ask about other Silostop® products to protect your forage from birds and help eliminate tires.

“This was the best sealed section of a large bunker I have ever seen in my life!”

**Dr Keith Bolsen,
Professor Emeritus
Kansas State University,
USA**

“Silostop® is the greatest technological advancement since the Kernel Processor! Pull back a layer of Silostop®: see and feel the difference.”

**Bob Headrick,
silage contractor,
Hanford CA**
