## SILOSTOP GRAVEL BAGS

**S**ilostop Gravel Bags offer a convenient and effective solution for sealing silage bunkers and piles. Once filled, their shape ensures that covers are held securely in place. Use Silostop Gravel Bags instead of tires, which can shed wires or hold standing water. Gravel Bags should be placed along the perimeter, with a double layer on the front edge and along seams.

Silostop Gravel Bags are supplied with the following features

Tie string

Grab Handle

Fill-level line

Application guide

## BENEFITS

Eliminate tires for an easier, safer, more environmentally friendly weighting solution.

Oblong shape ensures the maximum sealing effectiveness when laid along seams and edges.

Robust woven netting material with a lifespan of at least 5 years.

Quick and easy to move as silage is taken from the face.

Pallet storage is simple and tidy.

## How to use Silostop Gravel Bags

Fill 2/3rds full (do not overfill) with small diameter smooth pea gravel. This allows for easy filling, water drainage, and long bag life. Use end to end on the edges and along seams. Put a double row of Gravelbags along the feedout edge of the bunker or pile.
