

SILOSTOP MAX

Silostop MAX has been developed by Silostop, the creators of the worldwide leading oxygen barrier film. It is an impermeable orange on black film that stops the entry of oxygen into silage. It is 3.2 mil thick and therefore suitable for larger applications. Silostop Max is a multi-layer, very strong silage film, which is easy to handle and apply. Its unique oxygen barrier properties are proven to be over 60 times more effective than conventional silage sheeting. Ideal for large piles or bunkers in especially windy area.

- Silostop MAX
- Conventional black PE plastic
- Conventional PE "Cling film"

BENEFITS

Spoiled silage is eliminated.
You get more feed from your silage!

Increased thickness allows ease of
application on large piles.

Dry matter (DM) loss is reduced by up to 50%
in the top 3 feet of silage compared to
conventional silage sheeting.

Silostop Oxygen Barrier Film has been and is continually
independently researched and there are dozens of published trials
proving that silage DM losses are reduced, aerobic stability is
improved and that nutrient levels are preserved at an optimum level.

DID YOU KNOW THAT

Cows have a sense of
smell that is 60X stronger
than ours ?

It is crucial to feed fresh
forage to achieve
optimum DM intake.

PRODUCT INFORMATION

Silostop Max is UV stable
but should be protected
from physical damage
with a Silostop Open
Net. Apply black side
down onto the silage.
